

# CHROMELEON ADVANCED

Chromeleon offers a flexible and scalable Chromatography data system, for recording data and operating more than 500 chromatography instruments. This includes third party instruments, Thermo Scientific single, triple quad and high resolution mass spectrometers, all controllable from the same workplace.

This training is intended to help you, as an experienced Chromeleon user, take a step further in Chromeleon. This training covers all topics that go beyond standard Chromeleon data processing. This includes complex integration issues, instrument configuration and extensive reports. Custom formulas, variables and associated items are also discussed.

## Course Topics

- Management of the Chromeleon software package
- Extensive instrument configuration and control
- Setting up advanced analytical methods and acquisition
- Automatic integration, complex calibration and troubleshooting
- Use of custom variables and formulas
- Creating and using reports
- Guided, independent software assignments.
