

CHROMELEON FOR ADMINISTRATORS

Chromeleon offers a flexible and scalable Chromatography data system, for recording data and operating more than 500 chromatography instruments. This includes third party instruments, Thermo Scientific single, triple quad and high resolution mass spectrometers, all controllable from the same workplace.

This course is intended for you as an experienced user of Chromeleon or IT professional, introduced to the administrator role. This includes various administrative functionalities such as Chromeleon installation, user management, client/server model configuration, instrument configuration and more.

Discover and delve into the specific features of Chromeleon CDS, focused on gas chromatography and expand your knowledge about this advanced software solution.

Course Topics

- Client/server administration
- Chromeleon software installation
- Firewalls, virus scanners and hardening software
- Instrument configuration, connection and drivers
- User mode and data management
- Notifications and version management
- Backups and task management
- Troubleshooting procedures
